## Peace in a Pod

We've designed our pods to ensure the best user experience possible by providing a quiet environment for those inside while also keeping the sound in.

Don't worry though, users will still be able to hear the important ring of an alarm from inside the pod.

## The Facts

We've had our Syneo Silence pods independently tested, so we'll let the result speak for themselves.

Speech level reduction according to ISO 23351-1: TBC

## The Knowledge

Speech level reduction measures how much an acoustic pod reduces speech-related noise. For consumers, a higher speech level reduction means a quieter and more private environment inside the pod.

Kelvin (K) relates to the colour temperature of light, while Lux (lx) measures luminance, indicating the brightness.

CFM (Cubic Feet per Minute) measures airflow volume, it is important for effective air changes to maintain good air quality and comfort.

Airflow and the airflow gap is essential for maintaining a comfortable and healthy environment within the acoustic pod, helping to dissipate any heat generated within the pod and ensures that air circulation is sufficient for occupants.
