NEBULA SCREEN
1.6 (26mm)

SPACEMANN

NEBULA SCREEN is a fully upholstered, non pinnable, non linking partitioning screen which creates a secure and private environment which in turn can promote focus and efficiency.

NEBULA SCREEN is designed in line with our sustainable principles and a consideration to its full life cycle. Nebula Screen is light weight and can be FSC® (License Code : FSC-C107429) certified product on request. The product itself comes in a wide range of sizes, both desk mounted and floor standing to fit an array of environments.

FEATURES

ECO Friendly

Ethically sourced materials. Designed with sustainability at the forefront of our mind. Can be an FSC® certified product on request.

Care And Cleaning

Remove dust and dirt by dusting, vacuuming, or with a cloth or sponge and a solution of carpet shampoo. Always use a soft, damp cloth and blot dry.

Privacy

Provides the user with a comfortable space to work in private whilst reducing noise.

Fixing and Brackets

Included as standard. Other brackets are available to suit most applications (see accessory page).

Materials

Foam (54g/m²)

MDF (570kg/m³)

Fabric (325g/m³)

ABS Plastic (1g/m³)

*Based on Era 170 1.11018FS exc fixings.
*Please visit <https://www.camirafabrics.com/en> for further and sustainability information regarding our fabric

NEBULA SCREEN 1.6

TECHNICAL INFORMATION

BS EN 1023-1 – European standard heights for office screens

ABSORB. Acoustic absorbers are normally used to correct the reverberation or unwanted reflections in a room. They work by dissipating sound energy as heat so that Less sound energy is reflected back into the room.

BLOCK. Acoustic screens are commonly installed between workstations and can act as sound barriers as well as providing sound absorption. Screens play a significant part in creating a good acoustic space in open plan offices where speech privacy is desired.

COVER. Sound masking systems are commonly used to artificially increase the ambient noise level in a particular area to provide a back-ground noise 'mask' to aid speech privacy. They work by providing a constant, low-level, broadband background noise which aids in reducing the distraction and privacy distances in open plan offices.
